Professional Summary

Fullstack Software Engineer with 2+ years of experience building production SaaS interfaces using React, Next.js, Javascript/TypeScript, Node.js and SQL. Contributed to a reusable UI system of 100+ components powering 45+ website templates, built interactive visual editing features and automated responsive and cross browser testing. Focused on maintainable UI architecture, reliable product experiences and shipping user facing features.

Education

Engineering College of Ajmer *Ajmer, Rajasthan, India · CGPA / Percentage: 7.62*
B.Tech in Information Technology Jul 2019 – Jul 2023

Skills

Languages: JavaScript, TypeScript, HTML5, CSS3, SQL, Python
Libraries & Frameworks: React, Next.js, Node.js, Express.js, Tailwind CSS, Material UI, FastAPI, React Native
Tools: Git, GitHub, Bitbucket, VS Code, Postman, Swagger/OpenAPI, Vite, Redux, Redux Toolkit, MongoDB, PostgreSQL, MySQL, OpenAI API, Codex, Claude Code, Vercel, Cursor, Docker
Methodologies: SOLID Principles, Cross-Browser Testing
Soft Skills: Communication & Collaboration, Teamwork, Attention to Detail

Work Experience

Software Engineer - Frontend Mar 2025 – Sep 2026
Laxaar Technologies
Remote

- Developed a foundational library of 100+ reusable components forming the core UI and section library for Webeix, a multi-tenant website builder SaaS, powering 45+ industry templates and live client sites.
- Performed end-to-end frontend feature delivery using Next.js and React, establishing clean integration with backend REST APIs to support User Experience across the entire SaaS platform.
- Introduced comprehensive responsiveness across theWebeix editor and template system, introducing a shared breakpoint hierarchy (from 1400px down to 360px) to adapt complex side panels, toolbars, and modals for tablet and mobile devices.
- Built UI for on page visual editing controls across multiple section variants, introducing floating action bars, 1-click section visibility toggles (hide/show), and quick action modals that allowed users to customize sites directly on the canvas without navigating backend menus.
- Automated cross-browser and responsive QA using Playwright across multiple breakpoints and devices, catching regressions pre-release and resolving 30+ production defects.
- Built the platform wide contextual help system with AI-agent assistance for Cadence (email marketing & deliverability platform), an accessible popover and a 46 screen route-keyed content map wired into the shared PageHeader.
- Contributed to Arivaa Suite a core project by fixing critical bug and implementing new features using SOLID Principles for maintainable, high quality code.
- AI-assisted development across mentioned projects using AI coding assistants for implementation, debugging, refactoring and documentation with agentic workflows and verification guardrails to keep output reliable.

JavaScript · CSS3 · React · Node.js · Next.js · Express.js · Ant Design · SQL · Context API

ReactJS Intern
Laxaar Technologies
Remote

- Built responsive features for a Stock Analysis Application using ReactJS and React Native (Expo), implementing search, pull-to-refresh, and API-driven screens.
- Integrated REST APIs across the application, handling API-driven data flows, loading states, error handling, and frontend-backend integration issues.
- Maintained and enhanced the company website (Laxaar), implementing search functionality and breadcrumb navigation to improve content discoverability and user navigation/experience.

React · React Native · Express.js · Expo · SQL

Frontend Developer Intern Oct 2023 – Dec 2023
S.S.WealthServ Technologies Pvt. Ltd. (Stealth Mode)
Remote

- Developed responsive user interfaces using ReactJS, Tailwind CSS, and Material UI while collaborating with backend developers to integrate REST APIs.
- Built reusable UI components and delivered production ready frontend features following modern development practices and responsive design principles.

React · Material UI

Projects

TimeLens | Web Time Tracker (Chrome MV3) *GitHub* Present

- Built an MV3 Chrome extension in TypeScript and Vite to accurately track web activity locally.
- Leveraging chrome.idle, chrome.windows, and chrome.tabs APIs with automatic AFK(away from keyboard) detection (60s threshold) and window focus tracking.
